2	BCADSN17425	Natural Language Processing
3	BCADSN17426	Human Computer Interaction

Note: 1. Student may select any subject from Co-Curricular list offered by the University

2. Student may selct any subject from Vocational Course list offered by the University

Bachelor of Computer Applications

(Data Science & Artificial Intelligence)
In Collaboration with IBM

Program	Bachelor of Computer Applications (DS 8	& AI)									
Year	1	Sem	ester	I							
Course Name	Python with Data Science										
Code	BCADSN11101										
Course Type	DSC	L	T	F	•	Credit					
Pre-Requisite		3	1	(4					
Course Objectives	Main objective of this course is using the demonstrate knowledge of statistical decision making and to learn how to Uproblems.	data anal	ysis techr	nique	s utilized i	n business					
Course Outcom	es										
CO1	Understand programming basics includi	nderstand programming basics including functions, variables, and data type.									
CO2	Data Science lifecycle revolves around methods to produce insights and prediobjective.	_				-					
CO3	Applying and analyzing, is the process o in training a model, and then creating thin log files and other sources.		•		•						
CO4	Understand Data engineering and data and building and create role-playing cha solutions				_	_					
Module	Course Contents				Contact Hrs.	Mapped CO					
1	Introduction of Python: What is Pythodisadvantages, how to run python variables, String operator and function Working with Boolean and other state library for data analysis, Different types encounter while working with Python.	scripts, is, Inputt ments, U	How to ing the d se of par	use ata, idas	15 Hrs.	CO1					
2	Introduction to Data Science: What is does a data scientist do, various example the industries, How Python is deploy applications, Various steps in Data Scientist wrangling, data exploration and selection	oles of Da yed for lence proce	ta Scienc Data Scie ess like c	e in nce	15 Hrs.	CO2					
3	Data Manipulation and Visualization: Introduction to NumPy, Pandas and Matplotlib, How to Import NumPy module, what is data Manipulation using Panda's library? Series object in pandas, Data Frame in Pandas, loading a handling data with Pandas, Introduction to Matplotlib, Using Matplotlib for plotting Graphs and charts like Scatter, Bar, Pie, Line,										
4	Supervised and Unsupervised Learning: What is linear regression? Logistic Regression, what is classification? Decision Tree, Confusion Matrix, Random Forest, Naïve Bayes classifier, support vector machine, use cases of unsupervised learning, what is clustering and Types of clustering. What is K-means clustering and Hierarchical Clustering? Step by step calculation of k-means algorithm

Program	Bachelor of Computer Applications (DS & AI)		
Year	Semester		
Course Name	Introduction to Statistical Method		
Code	BCADSN11112		
Course Type	GE L T	P	Credit
Pre-Requisite		0	4
Course Objectives	Subjects analyze statistical data graphically using frequency, of distribution, statistical data using central tendency, dispersion, concept & rules including additive and multiplicative laws.		
Course Outcom			
CO1	To apply statistical distributions methods for real life problems.		
CO2	To draw & demonstrate valid inferences based on the analysis of	of statistic	al data.
CO3	To Implement the concept of probability.		
CO4	To Implement the concept of conditional probability & Theoreti	ical distrib	ution.
Module	Course Contents	Contact Hrs.	Mapped CO
1	Population, Sample and Data Condensation: Definition and scope of Statistics, Concept of population simple with illustration, Raw data, attributes and variables, Classification, Frequency distribution, Cumulative frequency distribution. Different Frequency Chart: Histogram, Frequency Curve, Pi-Chart etc. Measurement of Central Tendency: Concept of Central Tendency, requirements of a good measures of central tendency, Types of Central Tendency: Arithmetic Mean, Geometric Mean, Harmonic Mean, Median and Mode for grouped and ungrouped data.	15	CO1
2	Measures of dispersion: Concept of dispersion, Absolute and Relative Measures of Dispersion: Range, Quartile, Interquartile Range, Mean Deviation, Standard Deviation Correlation and Regression: Concept and types of correlation: Karl Pearson's, Spearman's Rank correlation, Linear Regression: Concept and line of best fit (Y on X and X on Y).	15	CO2
3	Probability and Expected Value: Experiment, Sample Space, Event, Types of Events, Probability: Classical Approach, Subjective Approach, Axiomatic Approach & Modern Definition; Probability Theorems (Additive, Multiplicative).	15	CO3
4	Conditional Probability & Theoretical Distribution: Definition of conditional probability, Bayes's Theorem, Mathematical Expectation, Random Variable & Probability Distribution of Random Variable; Meaning of Theoretical Distributions, Difference between Theoretical & Observed Frequency Distributions, Binomial Distribution, Properties and Constants of Binomial Distribution.	15	CO4

Program	Bachelor of Computer Applications (DS &	λAI)											
Year	II	Semeste	er	Ш									
Course Name	Linux Lab												
Code	BCADSN13251												
Course Type	DSC	L	Т	F	Р (Credit							
Pre-Requisite		0	0	4	4	2							
Course Objectives	To provide the fundamental knowledge commands related to file handling, disk, familiarize the students to do shell progr	process u	tilities, re	direc	•								
Course Outcon	nes												
CO1	To demonstrate the basic knowledge of Linux commands and file handling util by using Linux shell environment.												
CO2	To introduce shell scripting for various	application	ns.										
Module	Course Contents Contact Hrs. CO												
1	 Use of Basic LINUX Commands: PATH passwd, uname, date, stty, pwd, cd, mw, rm, , more, wc Commands related to Input Output R Commands related to File handling a Commands related to Security by file umask, stickybit Commands related to disk utilities-du Implementation of Filters and Pipes Using vi editor do the following thing a. Cursor movement Text insertion Changing and replacing text Deleting text Searching the text Pattern Matching of text Various options to :set command Compiling and Running a C progress Note: Student will also perform all other course instructor. 	edirection nd Proces permission, df, find 8 s:	ir, cat,ls, s utilities ons: chmo	od,	30	CO1							

		1	,
	Write interactive shell scripts based on following:		
	a. Positional parameters		
	b. Arithmetic and Logical Operators		
	c. If-then-fi, if-then-else-fi, nested if-else, elif, case		
	structure		
	d. While, until and for loop		
	e. Shell Meta characters		
	2. Write a Shell script that accepts a filename, starting and		
	ending line numbers as arguments and displays all the		
	lines between the given line numbers.		
	3. Write a Shell script that deletes all lines containing a		
	specified word in one or more files supplied as arguments		
	to it.		
2	4. Write a Shell script that displays list of all the files in the	30	CO2
	current directory to which the user has Read, Write and		
	Execute permissions.		
	5. Write a Shell script that receives any number of file names		
	as arguments checks if every argument supplied is a file or		
	a directory and reports accordingly. If the argument is a		
	file, the number of lines on it is also reported. 6. Write a Shell script that accepts a list of file names as its		
	arguments, counts and reports the occurrence of each		
	word present in the first argument file on other argument		
	files.		
	7. Write a shell program to accept user name and reports if		
	user log has logged in.		
	Note: Student will also perform all other exercises provided		
	by course instructor.

Year	II	Sem	ester							
Course Name	IOT & Technology									
Code	BCADSN14222									
Course Type	DSE	L	Т	Р	Credit					
Pre-Requisite		3	1	0	4					
Course	To study fundamental concepts of IoT, To understand roles of sensors and hardware									
Objectives	in IoT, To learn different Wireless Technologies and protocols for IoT, Understand the									
	role of IoT in various domains of Industry.									
Course Outcomes										
CO1	Understand the various concepts, termi	nologies	and archit	ecture	of IoT syst	ems.				
CO2	Understand the use of sensors, actuators and IoT supported hardware for design of									
	IoT system.									
CO3	Understand and apply various wireles	s technol	ogy and	protoco	ols for des	sign of IoT				
	systems.									
CO4	Understand the various security aspects for IoT system.									
Module	Course Content	Contact Hrs.	Mapped CO							
1	Fundamentals of IoT: Concepts a Characteristics, Conceptual Framewo technology behind IoT, M2M Communi for Connected Devices: IoT/M2M sysstandardization, Application of IoT.	view, ciples	15	CO1						
2	Hardware for IoT: Sensors, Digital softendercy identification (RFID) technology networks, participatory sensing the Platforms for IoT: Embedded computing supported Hardware platforms such a and Raspberry pi.	15	CO2							
3	Wireless Technologies for IoT: IEEE 80 Zigbee, RFID, HART, LoRaWAN, NFCZ-V Protocols for IoT: IPv6, 6LowPAN, RI MQTT.	15	CO3							
4	Overview of IoT Security: Introduction Securing the Internet of Things, Architecture, Requirements, Security Protocols for IoT Access Networks, Attack, Defense, and Network Robustness of Internet of Things; Case Studies/Industrial Applications: Home Automation, Smart Cities, Smart Parking, Agriculture and Health Sector, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection.

Year	II	IV								
Course Name	Soft Computing									
Code	BCADSN14223									
Course Type	DSE	L	Т	Р		Credit				
Pre-Requisite		3	1	0		4				
Course Objectives	The main objective of the soft computing techniques to improve data analysis solution is to strengthen the dialogue between the statistics and soft computing research communities in order to cross pollinate both fields and generate mutual improvement activities.									
Course Outcomes										
CO1	To understand how soft computing and ANN approach influences various modern									
	developments.									
CO2	To understand learning rule and activation function.									
CO3	To understand different types of Fuzzy System used in real world.									
CO4	To understand type II fuzzy set and genetic algorithms.									
Module	Module Course Contents					Mapped CO				
2	Introduction: Soft Computing, Differ Computing and Hard Computing, R Computing, Applications of Soft Comp Artificial Intelligence, Models of Artif Feed forward artificial neural networks artificial neural networks, artificial neural networks, Recurrer Modular neural networks.
